Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Comment: This protein mediates and regulates various cell-cell interactions through bc
C;Superfamily: neural cell adhesion molecule; fibronectin type III repeat homology; immu
P;413-475/Domain: immunoglobulin homology <1MM>
P;512-589/Domain: fibronectin type III repeat homology <1RM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NiAlternate names: NCAM-180

NiAlternate names: NCAM-180

NiAlternate names: NCAM-180

NiContains: neural cell adhesion molecule, short domain form (NCAM-140)

Cispecies: Xenopus laevis (African clawed frog)

C; Date: 31-Mar-1993 #sequence_revision 31-Mar-1993 #text_change 22-Jun-1999

C; Accession: S09600

JB0100
Incural cell adhesion molecule 2 - African clawed frog
Incural cell adhesion molecule 2 - African clawed frog
N;Alternate names: N-CAM 2
C;Species: Xenopus laevis (African clawed frog)
C;Date: 19-May-1998 #sequence_revision 29-May-1998 #text_change 21-Jul-2000
C;Accession: JE0100
R;Xudo, M.; Takayama, E.; Tadakuma, T.; Shiokawa, K.
Biochem: Biophys. Res. Commun. 245, 127-132, 1998
A;Title: Molecular cloning of ssd-form neural cell adhesion molecules (N-CAMs) as the mata Richem on the cloude type: mRNA
A;Reference number: JE0100
A;Accession: JE0100
A;Accession: JE0100
A;Accession: JE0100
A;Residues: 1-725 - KUD>
A;Accession: Jeologan and regulates various cell-cell interactions through bc C;Superfamily: neural cell adhesion molecule; fibronectin type III repeat homology; immu F;413-475/Domain: immunoglobulin homology <IMM>F;512-589/Domain: fibronectin type III repeat homology <JRM>F;512-589/Domain: fibronectin type III repeat homology <JRM>F;512-589/Domain: fibronectin type III repeat homology <JRM>F;512-589/Domain: fibronectin type III repeat homology

MINKLER F.K., Hennig M.,

"X-ray structure of junctional adhesion molecule: structural basis for normalian adhesion via a novel dimerization motif.";

EMBO J. 20:4391-4398(2001).

-I-FUNCTION: Seems to plays a role in epithelial tight junction formation. Appears early in primordial forms of cell junctions and recruits PARD3. The association of the PARD6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing tight junction assembly. Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier.

Involved in platelet activation.

SERONIT: Interacts with the first PDZ domain of PARD3. The association between PARD3 and PARD6B probably disrupts this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. C. FURKTION: Seems to plays a role in epithelial right junction assembly (By similarity). Plays a role in regulating monocyte transmigration of the PRRD-PRAPP certified PARD3 with JAM1, thereby preventing regulating monocyte transmigration involved in platelet activation:

C. FURKLULAR LOCATION: Page I membrane protein (Potential).

Interaction of Page I membrane protein of both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Dowd P.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 "The secreted protein discovery initiative (SPDI), a large-scale effort to identify novel human secreted and transmembrane proteins:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE-22887296; PubMed=12975309; MEDLINE-22887296; PubMed=12975309; Clark H.P., Gurney A.L., Abaya B., Baker K., Baldwin D., Brush J., Chan J., Chai C., Crowley C., Currell B., Deuel B., Dowd P. **Combined treatment of TMP-alpha and IFM-gamma causes redistribution and increment of TMP-alpha and IFM-gamma causes redistribution of junctional adhesion molecule in human endothelial cells.";

1. Jummanol. 163:53-557(1999).

2. Immanol. 163:53-557(1999).

2. Terruits RARD3. The association of the PARD6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing prevent the interaction of PARD3 with JAM1, thereby preventing tight junction assembly (By similarity). Plays a role in regulating monocyte transmigration involved in integrity of epithelial barrier. Involved in platelet activation.

2. SUBUNIT: Interacts with the first PDZ domain of PARD3. The association between PARD3 and PARD6B probably disrupts this interaction (By similarity).

2. SUBCELLUIAR LOCATION: Type I membrane protein (Potential).

2. INSUR SPREIFICITY: Localized at tight junctions of both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                            DEVELOPMENTAL STAGE: THE MRNA ENCODING THIS LD-NCAM IS THE MAJOR TRANSCRIPT PRESENT IN BOTH MATERNAL RNA AND IN THE EMBRYO DURING EARLY NEURAL DEVELOPMENT.
                                                                       Nucleic Acids Res. 17:10321-10335(1989).
-!- FUNCTION: This protein is a cell adhesion molecule involved in neuron-neuron adhesion, neurite fasciculation, outgrowth of neurites, etc.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                                                                                                                                                                                                                                                                                              SIMILARITY: Contains 5 immunoglobulin-like C2-type domains. SIMILARITY: Contains 2 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N-LINKED (GLCNAC. . .) "Deleted in Colorectal Cancer (DCC) encodes a netrin receptor.";
Cell 87:175-185(1996).
-!- FUNCTION: May be involved as a regulatory protein in the
transition of undifferentiated proliferating cells to their
differentiated state. May also function as a cell adhesion
molecule in a broad spectrum of embryonic and adult tissues.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SIMILARITY: Belongs to the immunoglobulin superfamily. DCC family.
-!- SIMILARITY: Contains 6 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 InterPro; 1PR003957; FN III-like.

-! FUNCTION: May play important roles in selective fasciculation and zone-to-zone projection of the primary olfactory axons.
-! SUBCELLUAR LOCATION: Type I membrane protein.
-! TISSUE SPECIFICITY: Expressed most strongly in adult and fetal

R SIGNAL 1.

SIGNAL 1.
PROM THE TRANSMEMBRANB SEGMENT.
SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 8 fibronectin type III domains.
SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (POTENTIAL).
